Abstract

There are sequences of actions that we repeat everyday. Among them is the printing action: **print a numeric paper in pdf format and save it on your computer**, or **print it using a Xerox Machine or HP-printer**. We found out we can do More: Let us Print in 3D Dimension, and investigate other/new Structural Languages.

0.1 Introduction

3D printing connects the digital world to the physical universe by turning virtual computer designs into real, touchable objects layer by layer. [here]

0.1.1 Printing Applications of Interest

1. Nano Equipments [Nano-Textiles, info@imnovation-hub.com] [info@nanospace.cz][Nano-DeoTags]
2. 3D Equipments [here] [here] [here] [Aretek] [SQ4D] [here] [IconBuild] [press@3dwasp.com, studio@3dwasp.com, info@3dwasp.com] [info@innovation.ca, hr@innovation.ca, international@innovation.ca, atip-aiprp@innovation.ca] [lsherwood@deltechomes.com] [Cosmos 3D International, info@cosmos3d.tech] [Housing Observer- CMHC, contactcentre@cmhc.ca, media@cmhc.ca] [here] [experts@builtin.com] [Cobod] [Windsor, sdas@uwindsor.ca] [here] [Info@era-design.ca] [deltec-Home] [info@3dwasp.com] [Mudbots, support@mudbots.com, +1 (800)-733-2302] [etc.]
3. Graphology & Geometry : **At the beginning, was a verb, or a sound** [The Bible, here]:

Cymatics is the study of visible sound, showing how acoustic vibrations organize physical matter into symmetrical, geometric shapes [here]

0.2 The Theorem of Language Structural Density

The Theorem of Language Structural Density: In information theory and linguistics, altering the "shape and forms" of communication modifies both text scannability and structural density. [here]

The Proof is easy: Rather than using many words simultaneously, The visual dominance of shape is the key to unlock structural density and the word ratio count (r_w) is reduced: When shapes, colors, or icons carry meaning, text shifts from explanatory to complementary, drastically reducing word count while retaining core context.

Example 1: Let us take this Standard text: *"If you want to access your account dashboard, you need to click on the button that says login, which is located in the upper right corner of the website."*. The word ratio count (r_w) is 29 words.
Example 2: Let us assume we reduce the action login to Standard form: *[LOGIN]]*. The word ratio count (r_w) is 1 word.

The Theorem of Language Structural Density is related to the Second Law of User Interface Design: A computer shall not waste your time or require you to do more work than is strictly necessary [here].

This ends the Proof. (*This theorem is the key to realize that we need geometry and shapes to reduce words density while speaking in real life*! This justifies the usage of Presentation Templates in Universities, and the creation of many other languages [here] [here])

0.2.1 Some Examples of Shapes and Movies

In this Section, we will introduce some sacred geometry shapes [here[[Jan10]], and abstract polygones, here], Some movies, the Kryptonian Movie [here], [here] [here][here]

Figure 1: Those are Abstracts Polygones

Define Nodes: Assign unique words, named entities (people, places), or conceptual phrases as the vertices (nodes) of your network

0.3 Geometric Languages: New Theorems

0.3.1 Neural Graph with Significance for Texts (Some of Graphs Principles)

It is possible to define a neural graph with significance numbers for any text: to proceed, we simply assign unique words, named entities (people, places), or conceptual phrases as the vertices (nodes) of your network.

Texts can converted into a graph network by extracting key concepts as nodes and defining their co-occurrences or semantic relations as edges. In practice, we use Use tools like InfraNodus or graph libraries (NetworkX, Cytoscape) to render the structural layout. [here][here] [figure 2] [G-Thread]

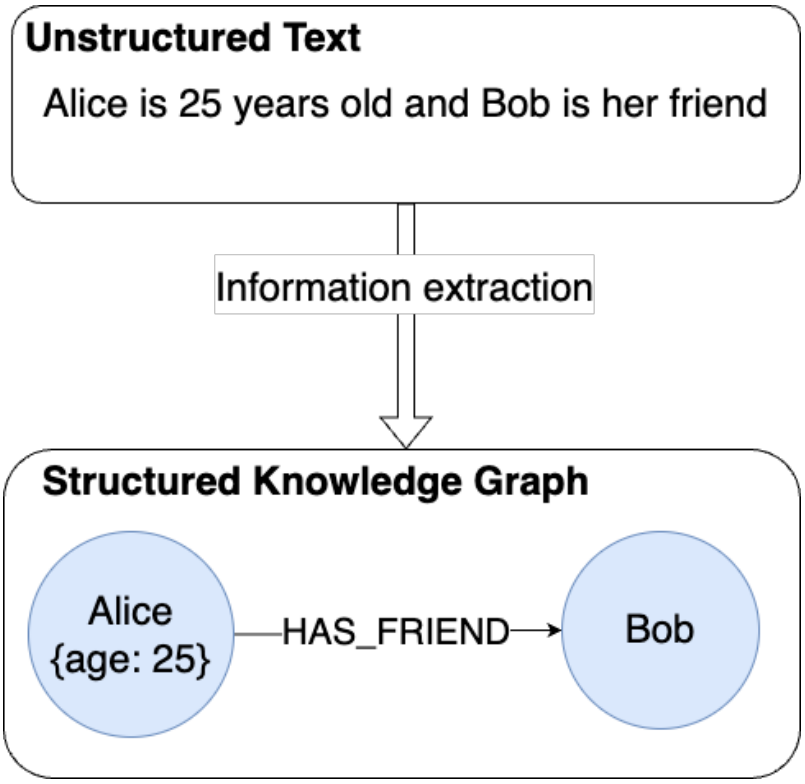

Figure 2: This an example of Text Conversion into Graph of Nodes Network, here

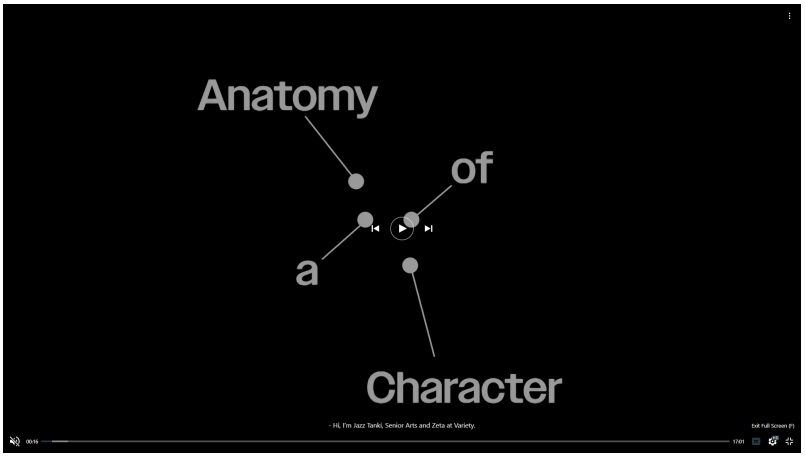

Figure 3: This an example of Text Conversion into Graph of Nodes Network [the text is: **Anatomy of a Character**], here

The Degree and the form of Association are the key to Introduce **Geometric Languages**:

The degree of association in a graph measures how strongly a named entity connects to other nodes based on its links and edge weights. [here]

An edge-weight is a numerical value assigned to an edge in a graph to represent the cost, distance, capacity, or strength of the connection between two nodes. here

0.3.2 Remark

: Comparing figure 2 and 3, you can realize the existence of many difference in geometric Shape, a domain of association, and type of LINK of association.

1. In figure 2, the Association between Alice and Bob can analyzed :
   - There is a domain of association: it is about friendship,
   - Two categories of Shapes are related and included :
     - The shapes associated with their respective representation is a circle [for Alice and Bob],
     - A linear flat $(\rightarrow)$ for the type of LINK defining the association.
   - There is a missing component here : The edge-weight of the Association is not defined.
2. In figure 3,
   - There no domain of Association defined;
   - No Shapes are used for each entity [Anatomy, of, a, Character], but A linear flat $(\rightarrow)$ is used for the type of LINK defining the association.
   - There is a missing component here as well: The edge-weight of each Association is not defined.

0.3.3 Theorem of Geometric Extension of Common Language

Theorem of Geometric Extension of Common Language: Any two named entities, let us denote U and V from a given corpus of dictionary, let us denote $\mathscr{D}$, have :

- An edge-weight of association (d),
- Finite or Infinite shapes for the representation of each entity, Let us denote W_{s_1}, the set of all shape of representation for the first entity, U, and , Let us denote W_{s_2}, the set of all shape of representation for the second entity, V.
- Finite or Infinite shapes for the **LINK** defining their association, Let us denote Z_s, the set of all shape of the the **LINK** association,
- And finally, a domain of association, Let us denote $\mathscr{D}$.

the Proof is Easy:

1. for the edge-weight of the association (d) between U and V, it is obvious, as basic definition of Graph nodes [here],
2. Each entity, U or V can be representated with or without a shape, we mean either W_{s_1} or W_{s_2} can be empty or non-empty. We simply apply the Neural Graph conversion of a Text introduced in section : **0.3.1**.
3. The existence of Association define a **LINK**. This link may be represented by a shape, and Z_s may be empty or non-empty.
4. For the domain of Association we simply apply again the Neural Graph conversion of a Text introduced in section : **0.3.1**.

0.3.4 Examples of Geometric Extension for the Sentence: Alice friend is Bob

1. In figure 4, the Association between Alice and Bob can analyzed :
   - There is a domain of association: it is about friendship,
   - Two categories of Shapes are related and included :
     - The shapes associated with their respective representation is a rectangle [for Alice], a circle [for Bob],
     - A linear flat $(\rightarrow)$ for the type of LINK defining the association, added with a triangle for the domain of the Association; it looks like a Delta form : Δ.
   - There is a missing component here : The edge-weight of the Association is defined as 10000.
2. In figure 5, the Association between Alice and Bob can analyzed :
   - There is a domain of association: it is still about friendship,
   - Two categories of Shapes are related and included :
     - The shapes associated with their respective representation is a rectangle [for Alice], a circle [for Bob],
     - A linear flat $(\rightarrow)$ for the type of LINK defining the association, added with a parallelepiped for the domain of the Association; it looks like a rectangular prism : here.
   - There is a missing component here : The edge-weight of the Association is defined as 200.

- The Mother of Boko Ulrich was once in the past the Director of College Les JAMBETTES of Porto-Novo. We will give more information about the different Directors we have met in those times by the past.
- Other Closed families can be quoted, here-17-1, or here-17-2: Koumagnon, Boko, Radji (we have met with Namaou Radji in Senegal, here), Corneille Onidogni, Hounto Ronel, Hounto Inès, Bamigboche, Monsieur Sourou Barthélémy DANSOU de la DESG[Director of Lycee Militaire des Jeunes filles de Natitingou][close to our family][here], Lawani family. We sent our Greetings Notes to Silifatou Bouari, here. Of course, we have memories of Agbomenou families, Romain Agbomenou, Francois Xavier Agbomenou, Judith Agbomenou, Firmine Agbomenou, etc.
- We truly regret the situation of many of our families uncles and grandfathers/grandmothers, have passed, we still do not beleive if this is true or not!, `https://fr.wikipedia.org/wiki/Damien_Zinsou_Alahassa` (for example). We need to get in touch with them, Yannick Alahassa, (`https://www.facebook.com/yannfaith`), Arielle Alahassa (`https://www.facebook.com/arielle.alahassa`), Fifame Alahassa (`https://www.facebook.com/bibiane.debamako.9`), Hillary Alahassa (`https://www.facebook.com/hillarydoheto/about`), Cedric Alahassa, etc.
- Two Important incidents happened when we were kids: Gwladys Enagnon Alahassa had an incident with someone on the road driving a bycicle [we were playing on a sable of construction, figure 6, we were present during the event], and they drive her in Hospital Louis Pasteur or [Hopital El Fateh] [We can verify later]. We were living near Les Jambettes College. Personnaly, I had a hard experience when we were kids when taking a bath, I broke my skull nuke, and father Hounto, our neighbor, drive me in my Mother Hospital. Ouando Clinic Hospital.
